

SKU: PPDRAWBATTERY

Not every vehicle has an **OBD port**—but parasitic draw can happen anywhere. The **PPDRAWBATTERY** adapter extends the capability of the Power Probe **PPDRAW Draw Monitor**, allowing technicians to test directly at the battery on motorcycles, boats, forklifts, classic cars, and more.

By converting the **PPDRAW's OBD2 connection** into alligator clamps, this adapter enables the same advanced diagnostic process on any battery-powered system. It allows you to safely disconnect the battery while the **PPDRAW maintains power** and continuously monitors current draw—without resetting electronics or interrupting the circuit.

With the **PPDRAWBATTERY**, your PPDRAW becomes a truly universal diagnostic solution, ready to handle parasitic draw testing across virtually **any application**.

Key Features

- **OBD2 to Battery Connection:** Easily converts the PPDRAW's OBD2 interface into alligator clamps for direct battery access.
- **Full PPDRAW Functionality:** Retains memory-saving and continuous current monitoring capabilities.
- **Universal Compatibility:** Ideal for motorcycles, ATVs, boats, forklifts, lawn equipment, classic vehicles, and more.
- **Fast & Simple Setup:** Connect to the battery, plug in the PPDRAW, disconnect battery ground lead and start diagnosing immediately.
