

SKU: PPDRAWTRUCK

The **PPDRAWTRUCK adapter** expands the capability of the Power Probe PPDRAW Draw Monitor, enabling accurate **parasitic draw** diagnostics on vehicles equipped with a **J1939 9-pin connector**.

By converting the **PPDRAW's OBD2** connection to the **J1939 interface**, this adapter allows technicians to apply the same proven diagnostic workflow used on modern vehicles. It **keeps the system powered** while the battery is disconnected, ensuring continuous current monitoring without resetting modules or triggering electronic activity.

Designed for fleet technicians and heavy-duty repair environments, the PPDRAWTRUCK delivers a fast, reliable solution for **diagnosing parasitic draw on trucks, trailers, and commercial platforms**.

Key Features

- **OBD2 to J1939 Conversion:** Adapts the PPDRAW to the 9-pin diagnostic port used in heavy-duty trucks.
- **Full PPDRAW Capability:** Maintains memory saver and continuous parasitic draw monitoring functions.
- **Accurate, Stable Testing:** Monitor current draw without resetting systems or waking vehicle electronics.
- **Built for Heavy-Duty Use:** Ideal for semi trucks, commercial vehicles, and fleet maintenance operations.
- **Plug-and-Play Setup:** Connect to the diagnostic port, plug in the PPDRAW, disconnect vehicle battery and start testing immediately.
